DETAILED ACTION

The amendment and remarks filed 3/23/06 have been acknowledged and entered.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 3-4,13-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 3, 4, and 13, "the length" lacks antecedent basis.

The rejections under 35 U.S.C. 112, second paragraph, and 103(a) stated in paper No. 010506 have been withdrawn in view of applicant's amendment.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Masuda et al. (4,381,325)(new reference).
5. Masuda et al disclose a brush whose bristles have been treated to make them hydrophilic or hydrophobic. See col. 4, lines 44-57, and col. 5, lines 23-43.

6. It would have been obvious for one skilled in the art to use the treated brush taught by Masuda et al. to obtain the claimed process. This is because scrubbing the wafer is intended use limitation.

7. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Namba (US 2002/0092544) (new reference).

Namba teaches a wafer-cleaning device with brush and scrubber where the scrubber can be made of PTFE which is rendered either hydrophilic or hydrophobic by chemical treatment (i.e. attaching ligands). See paragraphs 9, 37, and 39.

The reference does not teach the scrubber is a bristle brush as claimed.

It would have been obvious for one skilled in the art to replace the scrubber taught by Namba by brush to obtain the claimed process. This is because using a hydrophilic or hydrophobic bristle brush is well known in the semiconductor cleaning art.

Response to Arguments

8. Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.
